Subject: XRP7603, XRP7604 and SP7600 Advance Product Change Notice

In order to guarantee uninterrupted availability and reduce ordering lead-time, Exar Corporation decided to modify some of the components used in manufacturing the XRP7603, XRP7604 and SP7600 product families, members of Exar's portfolio of high power step down LED regulators.

The purpose of this letter is to serve as an advance product change notice on said modifications and, while anticipated to be minor, review their impact on the products specifications and performances.

XRP7603, XRP7604 and SP7600 product families are an assembly of a controller and one FET transistor. The following modifications are taking place:

- Transfer of the controller to a different manufacturing site and process

Our analysis show that the manufacturing site and process transfer of the controller portion has no incidence on the XRP7603, XRP7604 and SP7600 specifications and performance. Complete details of parameters modifications will be released upon publication of the final product change notice.

Thank you for your attention to this matter. Please do not hesitate to contact me directly if you have any questions or need further information regarding these changes.

Please direct any product availability questions to customersupport@exar.com or lisa.bedard@exar.com.
